To Whom It May Concern:

Re: Recycled Content of Permax Roofing and Wall Foam Systems

As far as Environmentally Friendly and "Green", our Roofing and Wall Foam contain HFC-245fa blowing agent, which is a Zero Ozone Depleting material that is "Ozone Friendly." Our Products are CFCs and HCFC Free.

On VOCs (Volatile Organic Compounds) as classified by U.S. EPA, our RT-2035 (A & B) and RT-2045 (A & B) products contain HFC-245fa (Enovate 3000®), which is an exempt compound. These foam products also contain "catalytic amounts" of non-exempt VOCs at less than 13g/liter level.

Our RT-2045 and RT-2035 materials contain NO FORMALDEHYDE. Upon review of our above formulation, we can report that RT-2045 contains No Cadmium, Mercury, Polybrominated Biphenyls (PBB), Polybrominated Diphenyl Ethers (PBDE), or Hexavalent Chromium.

Our construction products also contain a significant amount of Recycled Content in the "B" side from a polyol raw material that is made from regenerated PET scrap.

RT-2035-3.0-B resin has ~15.6% recycled content, which is ~7.8% total content in this Roofing Spray Foam.

RT-2045-2.0-B resin has ~18% recycled content, which is ~9% total content in this Wall Spray Foam.

Henry Company / Resin Technology are committed to the use of Green and Recycled Content in our products.
